Abacus.AI — Version 1.3 Changes

Date: September 11, 2026

Type: Folder Structure Enhancement

Agent: Abacus.AI

Summary

Added a **Documents/** subfolder to each client’s folder structure to provide a dedicated location for storing client-uploaded files, completed forms, attachments, and any other documents exchanged during coaching.

What Changed

Folder Structure Update

Previous structure:

```
01-Clients/  
├── [Client-Name]/  
│   ├── OPFMS- [Name].md  
│   └── Sessions/
```

New structure:

```
01-Clients/  
├── [Client-Name]/  
│   ├── OPFMS- [Name].md  
│   ├── Sessions/  
│   └── Documents/           # NEW – for uploaded files, forms, attachments
```

Purpose of the Documents/ Folder

- **Store client-submitted forms** (filled PDFs of M020, M021, P012, etc.)
- **Archive email attachments** the client sends
- **Keep reference materials** specific to this client (articles, worksheets, custom assessments)
- **Organize session-related files** without cluttering the Sessions/ folder

Updated Workflow: Creating a New Client

The “Creating a New Client” section in `Abacus-AI.md` now includes:

Step 3: Create subfolder: `01-Clients/[FirstName-LastName]/Documents/`

Full updated workflow:

1. Create folder: `01-Clients/[FirstName-LastName]/`
2. Create subfolder: `01-Clients/[FirstName-LastName]/Sessions/`
3. Create subfolder: `01-Clients/[FirstName-LastName]/Documents/` ← NEW
4. Inside the client folder, create a new note using Templater → insert `OPFMS-Client-Master` template
5. Answer all prompts
6. File auto-renames to `OPFMS-[FirstName-LastName].md`
7. Fill in remaining sections (personality, intangibles, facilitator notes)

Files Changed

- `05-Agents/Abacus-AI.md` — Updated:
- Folder Structure diagram (added Documents/ folder)
- Creating a New Client workflow (added step 3)
- Change Log (added v1.3 entry)

Action for Existing Clients

If you have existing clients in your vault (e.g., Joanna Abou Jaoudeh, Habib Bujawdeh), you can manually add a `Documents/` folder to their existing structure:

1. Navigate to `01-Clients/[Client-Name]/`
2. Create a new folder called `Documents`
3. Move any existing client files (PDFs, attachments) into it

This is optional — the folder structure will automatically be correct for all new clients moving forward.

Version 1.3 — Documents folder added to client structure
