

Abacus.AI — System Context & Instructions

Purpose: This file captures all design decisions, user preferences, workflow patterns, and structural rules for The Keystone Group's Obsidian-based coaching management system. Any AI assistant working on this vault should read this file first to understand the system architecture and user requirements.

Table of Contents

-

Project Overview

Context

The Keystone Group is a leadership and legacy development coaching practice that delivers the **Effective Personal Leadership (EPL12)** program — a 12-lesson structured curriculum developed by Leadership Management International (LMI).

The Problem We Solved

Previously, client tracking was done in Apple Numbers (`.numbers` files), which:

- Required credits/licenses to access
- Was not accessible to AI assistants for automation
- Lacked integration with other tools (Obsidian, transcripts, etc.)
- Was difficult to query across multiple clients

The Solution

A complete Obsidian vault system that:

- Uses plain Markdown files (zero-cost, AI-accessible, future-proof)
- Integrates with GitHub for version control and sync
- Connects with Obsidian for note-taking and client management
- Supports AI-assisted workflows (transcript parsing, goal extraction)
- Scales to ~20 active clients
- Prepares for future automation (Zoom/Fathom transcript integration, WhatsApp summary links)

User Requirements & Preferences

Core Requirements (from initial conversation)

1. **Zero-cost system after setup** — no recurring licenses or subscriptions
2. **AI-accessible data** — all client data should be readable/writable by AI assistants
3. **Obsidian integration** — native note-taking environment the user already uses
4. **Adaptive session workflow** — sessions are NOT always sequential (client may skip lessons, have grievances, incomplete assignments)
5. **Carry-forward logic** — new session notes should automatically pull open action steps and unfinished assignments from previous session
6. **Client capacity** — system must handle approximately 20 active clients simultaneously

Intangibles Tracking Requirements

Definition: Intangibles are behavioral or attitudinal habits the client wants to develop (e.g., “Freedom,” “Security,” “Confidence”).

Process:

1. Coach and client identify a specific behavior/attitude together
2. Client defines the scale: what +10, +5, 0, -5, -10 mean FOR THAT SPECIFIC INTANGIBLE
3. Scoring happens at the beginning OR end of each session
4. If the client wants to improve, they set a goal for the next week
5. That goal gets added to their weekly goals list

Key Point: Each intangible has a CUSTOM scale definition unique to that client and that behavior. The scale is NOT standardized across clients or intangibles.

Types:

- **Intangibles:** Behaviors, attitudes, feelings — scored on -10 to +10 scale with custom definitions
- **Tangibles:** Measurable indicators — can be numbers (weight, reps), checkmarks (✓/✗), or yes/no

Session Workflow Requirements

During Session:

- Facilitate brainstorming and idea generation with client
- Jot down goals and action steps in real-time
- All reading and discussions should generate goals and action steps
- Review goals/action steps with client at END of session before finalizing

End of Session:

- Choose the lesson/assignment for next time from a dropdown/selector (not always sequential)
- Pre-draft the client summary email/note
- Send or share summary (future: as a WhatsApp link to a markdown file)

Between Sessions:

- Client completes assignments (forms, reading, listening)
- Coach does NOT need the full transcript — only AI-extracted action steps from Zoom/Fathom transcript

PFS Scoring Requirements

Critical: PFS uses a **unified 100-point score** (not separate scores per form field).

Breakdown (total = 100):

- Application & Action: 10 pts
- Reading & Listening (6 reps target): 10 pts
- Best Idea (5 idea + 5 applied): 10 pts
- Business Goals Attainment: 10 pts
- Personal Goals Attainment: 10 pts
- Intangible Goal Attainment: 10 pts
- Satisfaction from Chapter (relevance to client's situation): 40 pts

Scoring Legend: The legend above must be included at the end of EVERY PFS form and in the session note PFS scoring table.

Forms & Assignments**All LMI forms must be:**

1. Converted to fillable Markdown fields
2. Stored in 02-Forms-Repository/
3. Available via dropdown/selector in session notes
4. Scored using the unified 100-point scale

Current forms:

- M020: Participant Feedback Sheet (PFS)
- M021: Action Steps Log
- M022: Emotional Intelligence Self-Evaluation
- P012: Personal Future Description
- P080: Business Future Description
- P011: Master Dream List (ongoing)
- M002: Bi-Weekly Goals Sheet
- A029: "Why War" article (supplementary reading)

Client-Facing Outputs**Requirements:**

- Email-ready markdown format
 - Eventually: send as a WhatsApp link to the markdown file (not yet implemented)
 - Must include: session highlights, goals for the week, assignment details, forms list, audio link, motivational closing quote
-

System Architecture

Folder Structure

```

Keystone-Obsidian-Vault/
├── 00-Templates/                # Master templates for duplication
│   ├── OPFMS-Client-Master.md
│   ├── Session-Note.md
│   └── Client-Summary-Email.md
├── 01-Clients/                  # One subfolder per client
│   └── [Client-Name]/
│       ├── OPFMS-[Name].md      # Client master sheet
│       └── Sessions/           # All session notes
├── 02-Forms-Repository/        # All LMI forms as markdown
├── 03-Assignments/             # Per-lesson assignment templates
├── 04-Resources/              # Guides, scoring references
├── 05-Agents/                 # AI context and instructions (this file)
└── README.md

```

File Naming Conventions

- **Client OPFMS:** `OPFMS-[FirstName-LastName].md`
- **Client folder:** `[FirstName-LastName]/`
- **Session notes:** `YYYY-MM-DD-Session-XX-LXX.md` (date, session number, lesson)
- **Forms:** `[FormCode]-[Form-Name].md` (e.g., `M020-PFS-Participant-Feedback.md`)

Version Control (GitHub)

- **Repo:** `https://github.com/jreijiri-creator/TheKeystone.git`
- **Branch:** `main`
- **Sync method:** GitHub Sync plugin in Obsidian
- **User:** `jreijiri-creator`

Workflow:

1. AI makes edits in `/home/ubuntu/github_repos/TheKeystone/`
2. AI commits and pushes to GitHub
3. User pulls in Obsidian via Command Palette → "GitHub Sync: Pull from remote"

Workflow Patterns

Creating a New Client

1. Duplicate `00-Templates/OPFMS-Client-Master.md`
2. Create folder: `01-Clients/[FirstName-LastName]/`
3. Create subfolder: `01-Clients/[FirstName-LastName]/Sessions/`
4. Rename duplicated template: `OPFMS-[FirstName-LastName].md`
5. Fill in YAML frontmatter
6. Fill in Participant Profile section
7. Run personality assessment → fill Personality Profile
8. Define intangibles together with client (custom scale definitions)

Starting a New Session

1. Open client's OPFMS-[Name].md → review Session Log for context
2. Duplicate 00-Templates/Session-Note.md
3. Rename: YYYY-MM-DD-Session-XX-LXX.md
4. Move into 01-Clients/[Name]/Sessions/
5. Fill **Carry-Forward** section from previous session note
6. Update intangible scores at start or end of session
7. Take notes during session
8. At end: choose assignment from selector, draft client summary
9. Copy summary → finalize → send/share

Processing AI Transcripts

Current Workflow:

1. Download Zoom/Fathom transcript after session ends
2. Paste excerpt into session note's "AI-Derived Action Steps" section
3. Ask AI: "From the transcript below, extract ONLY concrete action steps or commitments. List as bullets."
4. Paste extracted action steps into the session note
5. Incorporate into goals list

Future (when webhook available):

- Auto-populate action steps field from transcript API

Scoring PFS

When: After client completes lesson and submits M020 form.

Process:

1. Review client's M020 form submission
 2. Fill PFS Scoring table in session note
 3. Apply scoring legend (see PFS Scoring Methodology section)
 4. Record total /100 in session log
 5. Update client's OPFMS tangible tracking table
-

PFS Scoring Methodology

Unified 100-Point Scale

Category	Max	How to Score
Application & Action	10	Did client complete action steps in M021? Full = 10, Partial = 5, None = 0
Reading & Listening	10	Combined reps target = 6. Score = (actual / 6) × 10, rounded
Best Idea	10	5 pts for identifying idea + 5 pts for applying (or planning to apply) it
Business Goals Attainment	10	Self-assessed vs. goals set last session. Full = 10, Partial = 5-7, None = 0
Personal Goals Attainment	10	Self-assessed vs. goals set last session. Full = 10, Partial = 5-7, None = 0
Intangible Goal Attainment	10	Based on intangible score movement toward goal. Reached = 10, Progress = 5-8, None = 0
Satisfaction / Relevance	40	How relevant was this chapter to client's current situation? Self-reported. Range: 0-40

Interpretation Benchmarks

Total Score	Interpretation
90–100	Exceptional engagement — celebrate and anchor
75–89	Strong — acknowledge and build momentum
60–74	Good — identify what held back full engagement
40–59	Moderate — explore blockers; adjust approach
Below 40	Low — significant follow-up required; check motivation

Template Usage & Philosophy

OPFMS Client Master Template

Purpose: Single source of truth for each client. Contains everything the coach needs to know about a client across their entire program.

Key Sections:

- Participant Profile (contact info, job, organization)
- Personality Profile (Analyzer/Supportive/Enterpriser/Promoter assessment)
- Win-Win Challenges (core issues client is addressing)
- Personal Leadership Evaluation (baseline → current scores)
- Wheel of Life (6 pillars + scores)
- **Intangibles Registry** (custom scale definitions + scoring history per intangible)
- Tangible Indicators Tracking (weekly tracking table)
- Session Log (all sessions with dates, lessons, PFS scores, outcomes)
- Important Facilitator Notes (patterns, quotes, what NOT to do with this client)

Design Philosophy:

- All client context in ONE file
- Easy to review before a session
- Longitudinal tracking (patterns emerge over time)

Session Note Template

Purpose: Real-time workspace during a session + deliverable generator.

Key Features:

- **Carry-Forward Section:** Auto-populated from previous session (open action steps, unfinished assignments, ongoing goals)
- **Adaptive:** Not tied to a specific lesson (can choose any lesson or none)
- **Intangible Check-In:** Score at start/end, set goals if needed
- **AI Transcript Section:** Paste excerpt, extract action steps

- **Goals Set This Session:** Personal, Business, Intangible, Carry-Forward
- **PFS Scoring Table:** Unified 100-point score with legend
- **Assignment Selector:** Dropdown-style table to choose forms for next session
- **Client Summary Draft:** Pre-filled at bottom, ready to copy/send

Design Philosophy:

- One note = one session's full context
- Coach can work top-to-bottom during session
- Outputs (summary, goals, PFS) generated in same note

Client Summary Email Template

Purpose: Clean, client-facing note with goals and assignments.

Design Philosophy:

- No coach notes or internal observations
- Positive, encouraging tone
- Clear next steps
- Future: shareable as WhatsApp link

Forms System

Repository Structure

All forms live in `02-Forms-Repository/` as fillable markdown templates.

Form Conversion Standards

When converting PDF forms to markdown:

1. Preserve all fields and questions
2. Use markdown tables for multi-item scales
3. Include scoring legends where applicable (especially PFS)
4. Add YAML frontmatter with form metadata
5. Keep copyright notices intact (adapted for markdown)

Current Forms Inventory

Code	Name	Lesson	Type
M020	Participant Feedback Sheet (PFS)	Each	Scoring + reflection
M021	Action Steps Log	Each	Habit tracker
M022	Emotional Intelligence Self-Evaluation	L02	Self-assessment (20 items)
P012	Personal Future Description	L02	Vision exercise
P080	Business Future Description	L08	Vision exercise
P011	Master Dream List	L01+	Ongoing list
M002	Bi-Weekly Goals Sheet	Each	Goal tracker
A029	"Why War" Article	L02-03	Supplementary reading

Client Management Approach

Scale

- Target capacity: **~20 active clients**
- Session frequency: typically bi-weekly (every 2 weeks)
- Program duration: 12 lessons over ~6 months

Privacy & Security

- **All client data is confidential**
- GitHub repo should remain **private**
- When sharing examples, anonymize or use existing example (Joanna)

Facilitator Style Notes

From the OPFMS structure, we know the facilitator tracks:

- "What NOT to do with this participant"
- "How to care" (individualized support approach)
- "People to network with this participant"
- Observed patterns and important quotes

This suggests a highly personalized, relationship-driven coaching model.

Future Roadmap

Near-Term (Next 3 Months)

1. **Template Placeholder System**
 - Decide: simple manual placeholders vs. full Templater automation
 - Update all templates accordingly
2. **Dataview Queries**
 - Build queries for: active clients list, recent sessions, low PFS scores, upcoming sessions
3. **Additional Forms**
 - Convert remaining LMI forms as they come up in lessons 3-12
4. **Habib Bujawdeh Client**
 - Complete OPFMS setup for the newly created client

Mid-Term (3-6 Months)

1. **WhatsApp Link Sharing**
 - Generate shareable markdown links for client summaries
 - Options: Obsidian Publish (paid) or self-hosted static site
2. **Transcript Integration**
 - Automate action step extraction from Zoom/Fathom
 - Webhook or API integration
3. **Dashboard View**
 - Create a vault homepage with Dataview dashboards
 - At-a-glance view of all 20 clients

Long-Term (6+ Months)

1. **Automated Session Prep**
 - AI generates pre-session briefing from previous notes
 - Auto-populated carry-forward section
2. **Goal Tracking Automation**
 - Cross-note goal status tracking
 - Alert when goals are overdue or incomplete
3. **Analytics**
 - PFS trends over time
 - Intangible progress visualization

Technical Notes

GitHub Sync Setup

Plugin: GitHub Sync (Obsidian Community Plugin)

Initial Setup Commands (run in terminal at vault location):

```
git init
git remote add origin https://github.com/jreijiri-creator/TheKeystone.git
git fetch origin
git branch -M main
git reset --hard origin/main
```

Ongoing Workflow:

- AI edits files in `/home/ubuntu/github_repos/TheKeystone/`
- AI commits + pushes to GitHub
- User pulls in Obsidian: Command Palette → “GitHub Sync: Pull from remote”

Recommended Obsidian Plugins

Plugin	Purpose	Essential?
Dataview	Query notes, build dashboards	Yes
Templater	Auto-fill templates (if we use advanced mode)	Optional
Calendar	Visual session calendar	Nice-to-have
GitHub Sync	Push/pull to GitHub	Yes

File Encoding & Line Endings

- **Encoding:** UTF-8
- **Line endings:** LF (Unix-style)
- **No BOM**

Backup Strategy

- **Primary:** GitHub repo (version controlled)
- **Secondary:** iCloud Drive (where vault lives)
- **Frequency:** Real-time (GitHub Sync after each session)

Change Log

Date	Version	Changes
2026-09-11	1.0	Initial creation — captured all requirements from vault build conversation

Instructions for AI Assistants

When working on this vault in future conversations:

1. **Always read this file first** before making structural changes
 2. **Preserve the unified 100-point PFS scoring system** — do not revert to separate scores
 3. **Respect the intangibles custom scale philosophy** — each intangible has unique definitions
 4. **Maintain the carry-forward logic** in session notes
 5. **Keep the adaptive session workflow** — never assume lessons are sequential
 6. **Update this file** when user requirements change or new patterns emerge
 7. **Test changes** by pushing to GitHub and confirming user can pull successfully
 8. **Create a changelog note after every edit** to the `05-Agents/` folder — format: `[AGENT-NAME] - v[X.X]-Changes.md` documenting what changed and why
