Abacus.AI — Version 1.1 Changes

Date: September 11, 2026

Type: Template Update — Templater Plugin Integration

Agent: Abacus.AI

Summary

Rewrote all three master templates to use proper **Templater plugin syntax**. Templates now auto-prompt for all required fields when a new note is created from them, replacing every placeholder automatically — including the YAML frontmatter, title, body, and client summary draft.

What Changed

Session-Note.md (full rewrite)

- Replaced all `{{CLIENT_NAME}}`, `{{date}}`, `{{session_number}}` etc. with Templater prompts
- Added Templater header block (`<%* ... -%>`) that collects:
 - Client Full Name (prompt)
 - Session Number (prompt, default “01”)
 - Lesson Number (prompt, default “L01”)
 - Lesson Title (prompt, optional)
 - Session Type (dropdown: Regular / Grievance / Catch-up / Review / Free-form with emoji labels)
 - Auto-generates today’s date in both YYYY-MM-DD and long format
 - **Auto-renames the file** to `YYYY-MM-DD-Session-NN-LXX` format
 - Auto-populates the client name in the Summary Draft section at the bottom
 - Auto-fills YAML tags with the client name slug

OPFMS-Client-Master.md (full rewrite)

- Added Templater header block that collects:
 - Client Full Name (prompt)
 - Client Email (prompt)
 - Client Mobile (prompt)
 - Date of Birth (prompt)
 - Job Title (prompt)
 - Organization (prompt)
 - Program Start Date (prompt, defaults to today)

- Facilitator Name (prompt)
- **Auto-renames the file** to `OPFMS-FirstName-LastName` format
- Auto-populates the Participant Profile table with entered values
- Auto-fills all frontmatter fields

Client-Summary-Email.md (full rewrite)

- Added Templater header block that collects:
 - Client Full Name (prompt)
 - Session Number (prompt)
 - Lesson Number (prompt)
 - Sent Via (dropdown: Email / WhatsApp with emoji labels)
 - **Auto-renames the file** to `Summary-FirstName-LastName-Session-NN` format
 - Auto-fills client greeting and all frontmatter
-

How to Use the New Templates

Prerequisite: Templater Plugin Setup

1. Settings → Community Plugins → Browse → install **Templater**
2. Settings → Templater:
 - Set **Template folder location** to `00-Templates`
 - Enable **Trigger Templater on new file creation**
 - (Optional) Set hotkey: `Alt+T` for “Templater: Open Insert Template Modal”

Creating a New Session Note

1. Navigate to `01-Clients/[Client-Name]/Sessions/`
2. Create a new note (Ctrl/Cmd+N)
3. Open Command Palette → “Templater: Open Insert Template Modal”
4. Select `Session-Note`
5. Answer the prompts:
 - Client Full Name → e.g., `Habib BuJawdeh`
 - Session Number → e.g., `01`
 - Lesson → e.g., `L01`
 - Lesson Title → e.g., `Designing Your Life`
 - Session Type → pick from dropdown
6. File auto-renames to `2026-09-11-Session-01-L01.md`
7. All `<% ... %>` tags replaced with your answers throughout the note

Creating a New Client OPFMS

1. Navigate to `01-Clients/`
2. Create a new subfolder for the client
3. Inside it, create a new note
4. Open Command Palette → “Templater: Open Insert Template Modal”
5. Select `OPFMS-Client-Master`
6. Answer the prompts (name, email, mobile, DOB, job title, org, start date, facilitator)
7. File auto-renames to `OPFMS-FirstName-LastName.md`

8. All fields pre-filled in both YAML and the Participant Profile table

Creating a Client Summary

1. Navigate to the client's Sessions folder (or anywhere)
2. Create a new note
3. Open Command Palette → "Templater: Open Insert Template Modal"
4. Select `Client-Summary-Email`
5. Answer the prompts
6. File auto-renames to `Summary-ClientName-Session-NN.md`
7. Clean client-facing summary ready to finalize and send

No Content Changes

Only the placeholder system was changed. All sections, fields, PFS scoring tables, forms selectors, intangibles registry, and workflow logic remain identical to v1.0.
